## LS ZERO FLUSH DESIGN

Crisp, minimalist solutions are today's trend in interior design, focusing on surface continuity and fluidity in a linear approach.

Accessories are central to this trend and Jung's solution is the LS ZERO series, a progression of the classical LS 990 range that "stood out" precisely because the switches, sockets and smart components could be mounted almost flush with the wall or other base.

LS ZERO has a simple mounting system, using millimetric precision, to create a flush finish regardless of the base - brick wall, plasterboard or even furniture.

There is a version with a 3-mm thick profile for rooms where wallpaper or

wall cladding solutions are used. The visual continuity of this is enhanced by the accessory plate overlapping the cladding by 1.5 mm.

The LS ZERO range can be used to operate over 200 features, from lighting and temperature control to opening and closing curtains, from modulating a sound or multimedia system to monitoring the intercom or running automated devices.

The matt shades of Les Couleurs® Le Corbusier are available for this version, along with white, stainless steel, aluminum, and classical and dark brass options, to ensure the right fit in any environment.
